

ACADEMIC RESEARCH → LIVE PROTOCOL

DP02U

This is *DP02U*.

The HTTPS of compliance — for Web2, Web3, and the agent economy.

Frederico Santana • DP02U

FOUNDER

Frederico Santana.

Specialist in Compliance & Data Protection. Master's in Law, Technology & Innovation, **FGV**. A decade studying the technological mechanisms of cooperation — DPO2U is the practical outcome.

THE COST OF THEATER

€1.2B

Meta's 2023 privacy fines — with a full compliance program, a named DPO, and a mountain of PDFs. ***The PDF stopped nothing.***

Compliance today is theater: documents nobody reads, proving nothing.

ORIGIN

Compliance was born as a *wax seal*.

A thousand years binding, the moment hot wax met paper. Demonstrable. Unforgeable. Verifiable by anyone. We digitized everything — and lost the seal.

TODAY

Compliance is *theater*.

PDFs no one reads. Spreadsheets no one opens. And when proof is required, companies are forced to hand sensitive data to third parties.

THE TRAP

Prove, and you *violate*.
Protect, and you *can't prove*.

Proving means exposing customer data — and that collides head-on with LGPD.

THE BREAK

The score stays *private*.
The proof is *public*.

DPO2U breaks the trap. One API call generates a zero-knowledge attestation, sealed on Stellar. *The regulator doesn't believe — it verifies.*

LAW INTO CODE • DUST COMPLY

Rules become circuits. The seal *funds itself*.

An MCP that turns law into code. On Midnight, our self-funding agent is live — and now a paymaster: holders delegate idle DUST, *keeping custody*, and DPO2U seals compliance for any dApp, free. We call it *Dust Comply* — the ecosystem's accumulated DUST, managed to confer compliance.

COVERAGE

24

JURISDICTIONS

67

COUNTRIES

both

REGIMES SEALED

Privacy regimes and AI governance. Accessible via any wallet, smart contract, or AI agent. The only protocol that seals both — *enabling regulated, institutional real-world assets.*

THE MODEL

Free to adopt. *Paid at scale.*

FREE • DAPPS

The adoption moat.

Any dApp seals compliance at zero cost — that's how a protocol wins.

PAID • BIG PLAYERS

Compliant DUST capacity.

Institutions, RWA issuers, high-volume agents pay to tap the pool — gated by the seal.

\$23B market today → **\$105B by 2034** · three tiers · software margins >80% · a fraction of consulting cost.

ONE PROTOCOL, BOTH REGIMES

The trust *and capacity* layer.

Today's regulated markets; tomorrow's machine economy. With Dust Comply, the same seal becomes the *compliant gas* that lets regulated players operate on-chain.

TRACTION

Already *sealed.*

Health

live client

Energy

live client

DePIN

live client

Sensitive data never moves — only the proof that the rule was met. And the paymaster is *live on Midnight preview*: delegate → seal → confer.

THE ASK

Capital for the seal.

SAFE • \$3M post-money • 18 months

To land the regulatory wave.

THE INEVITABILITY

Regulation *will* move on-chain.
The question is *who builds the protocol.*

That's us. DPO2U — the HTTPS of compliance for Web2, Web3, and the agent economy.

Seal *with us.*

Thank you.
