

• LIVE ON MIDNIGHT PREVIEW

The self-funding seal — **free for every dApp.**

DPO2U Paymaster · [Dust Comply](#)

To become the protocol, win adoption first — **give the compliance seal away**, paid for by the ecosystem's idle DUST. Then the big players who need **compliant capacity** pay to use it.

Frederico Santana · DP02U · Midnight Build Club

THE SEAL

Compliance was born as a wax seal. We digitized everything — and **lost it.**

For a thousand years, hot wax on paper was binding. Demonstrable. Unforgeable. DPO2U restores it on-chain: **the score stays private, the proof is public.** The regulator doesn't believe — it verifies.

WHAT WE ALREADY PROMISED

A self-funding agent — native to Midnight.

"An autonomous agent that stakes NIGHT, consumes DUST, and performs attestation using selective disclosure."

That agent works today. The question was never how to bill for it — it's **how to get the whole ecosystem sealing with it.**

THE BARRIER TO ADOPTION

The seal costs DUST. That's a **wall** in front of every dApp.

- DUST is **non-transferable** — only NIGHT holders generate it.
- To prove compliance, a dApp must hold NIGHT and babysit DUST regeneration.
- So most don't — compliance stays **theater**, and adoption stalls.
- Meanwhile the ecosystem's NIGHT generates DUST that sits **idle**.

THE MOVE

Don't sell the seal. Give it away.

FREE FOR dAPPS

DPO2U pays the DUST.

Any dApp gets its compliance sealed at **zero cost** — no NIGHT to hold, no DUST to manage. Just adopt the seal.

NON-CUSTODIAL POOL

Idle DUST pays for it.

NIGHT holders **redirect their idle DUST** to the pool and **keep their NIGHT**.
Revocable anytime. No cash changes hands.

DUST COMPLY

Pooled DUST that **confers compliance.**

- Participants delegate idle DUST — and keep custody of their NIGHT.
- The pool seals compliance for dApps **and** confers the seal to the participants themselves.
- DPO2U becomes the **manager of the ecosystem's accumulated DUST** and its compliance layer.
- The prize is the **protocol position** — not a per-transaction fee.

Three legs, one loop.

1

Delegate

`registerNightUtxosForDustGeneration(..., poolDustAddress)`

Holder cedes idle DUST — keeps NIGHT. → [PaymentGateway.registerDustDelegation](#)

2

Seal — free

`balanceUnboundTransaction(tx, poolKeys, { tokenKindsToBalance: ['dust'] })`

Pool pays the DUST fee to seal a dApp's attestation. →

[ComplianceRegistry.recordSponsoredAttestation](#)

3

Confer & monetize

dApps: sealed free. Big players: pay to tap the pooled DUST for their own tx — **compliance is the gate**. → [recordSponsoredAttestation](#) + [FeeDistributor.recordLpRevenue](#)

WHY IT MUST BE ON-CHAIN

Rip out Midnight and the seal breaks.

- **DUST-generation redirect** is a Midnight ledger primitive — nothing else has it.
- **Non-custodial delegation**: holder keeps custody, only the fee resource flows.
- **Score-private seal**: prove $\text{score} \geq \text{threshold}$ without revealing the score.
- It makes the seal **free and self-sustaining across the ecosystem**.

Dust Comply
circuits (compiled)

E2E

delegate → seal
→ confer

0

type errors (tsc
clean)

```
npm run deploy:paymaster && npm run paymaster:demo && npm run  
verify:paymaster
```

Honest scope: the MVP proves the loop on the pool-sealed path; pure customer self-sponsorship is confirmed at the API level and is the next hardening step.

THE FLYWHEEL

Free seals compound into a moat.

Free seal

dApps adopt DPO2U

more idle DUST delegated

more free capacity

Capacity scales linearly with pooled NIGHT (cap 5 DUST/NIGHT, ~0.71/day sustained). Every new participant makes the free seal **cheaper to give** and DPO2U's position as the DUST-comply layer **harder to displace**.

Free to adopt. Paid at scale.

FREE · dApps

Adoption & the moat.

Any dApp seals compliance at zero cost.
This wins the ecosystem and the protocol position.

PAID · big players

Compliant capacity, on tap.

Institutions, RWA issuers and high-volume dApps **pay to tap DPO2U's pooled DUST** to power their own transactions — access **gated by compliance**. Compliant gas at institutional scale.

Same pooled DUST serves both. The free tier builds the moat; **big players monetize it** — booked on-chain via `FeeDistributor.recordLpRevenue`.

Grant funds the free tier. Big players fund the rest.

01

Harden **pure sponsorship** so any dApp self-builds and the pool attaches only DUST.

02

Ship the **free public paymaster** to mainnet + open SDK for any dApp to source the seal.

03

Onboard the **first cohort of dApps** sealed free + open holder delegation.

Amount: **[TBD – grant tier]** · Timeline: ~8 wks to mainnet · Milestone: N dApps sealed free + M holders delegating.

Seal with us.

Free compliance. Real adoption. **Dust Comply** — the DUST-management and compliance layer for Midnight. Live on preview today.
